SUSTAINABLE DEVELOPMENT

UNITES NACIONES, 1987 Report

“Our Common Future”

Development model that meets the needs of the present,
without compromising the ability of future generations to
meet their own.

Current patterns of production and consumption are not compatible with the long-term survival of the planet. This statement is not currently in doubt, but what the different agents do not agree on is what measures should be adopted at the political level to lead to the economic model that should prevail on the road ahead that makes it compatible with the natural environment that surrounds it serves as sustenance.
